Handlebars.js
Git/GitHub
Heroku
Firebase
PostgresQL

TECHNIQUES

Responsive Design
Agile Development
Behavior Driven Development
Test Driven Development
Pair Programming
RESTFUL API-Integration
Object Oriented Programming

PROJECTS

Six Word Stories - A Literary Platform

Built with React, PostgreSQL, Node.js, and Express.js

<http://SixWordStories.herokuapp.com>

Six-word Stories live close to my heart. The short form offers a creative challenge and sets a reader's imagination on fire. I created this app to provide a place for users to enjoy six-word stories and to create their own. This app utilizes React's component-based architecture to separate story display and story creation concerns.

Planet Wager - A Friendly Betting App

Built with React, PostgreSQL, Node.js, and Express.js

<https://PlanetWager.herokuapp.com>

Planet Wager provides a platform for users to place bets at any time, and wake up to winnings! Users can define their own bet (i.e. Japan wins men's figure skating) and invite their friends to accept the bet. Depending on the real world outcome, users will be awarded Spacebucks.

AbSense - An Absentee Reporter and Tracker

Built with HTML5, CSS3, Node.js, and Express.js

<http://Absense-671c0.firebaseio.com>

AbSense solves the educational challenge of tracking absent students by giving parents and educators a platform to communicate those absences. Live database communication allows seamless and accurate reporting across platforms.

EXPERIENCE

Roundtable Learning - 2014 - 2017

Denver, Colorado
